

# MRT Corp launches information hubs

**SERI KEMBANGAN:** Mass Rapid Transit Corporation Sdn Bhd (MRT Corp) has launched “touchpoints” that will serve as information hubs for the public on the Klang Valley Mass Rapid Transit (KVMRT) Line 2 and the Sungai Buloh-Serdang-Putrajaya Line (SSP).

The touchpoints comprise information centres, an information kiosk and an information truck.

Project director for the SSP Line Datuk Amiruddin Maaris said the touchpoints will enable MRT Corp to engage with and educate the public on the KVMRT project.

“These three types of touchpoints are being set up to act as a channel for the public to get information about the MRT project. Hence the term ‘touchpoint’ — a place or channel for the MRT project to keep in touch with the public and vice versa,” he said during the launch of the Seri Kembangan information centre at Atmosphere Business Centre here yesterday.

The second information centre is at Viva Residency in Jalan Sultan Azlan Shah, Kuala Lumpur.

Amiruddin said touchpoints were also channels to educate the public on the Sungai Buloh-Kajang Line (SBK), which is the

MRT Line 1.

“Following the success of previous touchpoints, MRT Corp has reintroduced it for the SSP Line as its main focus. The feedback from the public will be channelled to the authorities.”

The SSP Line will serve a corridor with a population of about two million people, stretching from Sungai Buloh to Putrajaya, and will include Sri Damansara, Kepong, Batu, Jalan Sultan Azlan Shah, Jalan Tun Razak, KLCC, Tun Razak Exchange, Kuchai Lama, Seri Kembangan and Cyberjaya. Phase one of the SSP Line, from Sungai Buloh to Kampung Batu, is targeted for completion by July 2021.

It is expected to commence full service in the second quarter of 2022, with 11 underground stations and 26 elevated stations and an expected ridership of 533,000 passengers per day.

Phase one of the SBK Line is scheduled to start operations between the Sungai Buloh and Jalan Semantan station in December this year. The SBK Line will be fully operational by July next year, with 31 stations, comprising 24 elevated stations and seven underground stations.
